Prediction of the Coding Sequences of Mouse Homologues of KIAA
Gene. The Complete Nucleotide Sequences of Mouse KIAA-homologous
CDNAS Identified by Screening of Terminal sequences of cDNA Clones
Randomly Sampled from Size-Fractionated Libraries.

L. Published Only in Database (2005)

                                                                                                                                                                                                                                                                                                                                                                                Submitted (199-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On May 9, 2003 this sequence version replaced gi:23270097.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html). NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                            Rat Genome Sequencing Consortium.

26-OCT-1999;

Murine trinucleotide repeat protein (TRP) cDNA sequence.

07-SEP-2001 (first entry)

AAS05278;

Novel transgenic animals useful as animal model for characterization of function of a gene encoding trinucleotide repeat proteins (TRPs), contains heterozygous disruption in a gene encoding TRP.

Cells comprising a heterozogous merings of producting a knockout cells comprising a heterozogous merings of producting a knockout mouse comprising a heterozogous disruption in a target DNA sequence (preferably gene T243) encoding a TRP and of producing a knockout mouse comprising a homozogous disruption in a gene encoding TRP, where the disruption inhibits the production of the wild type TRP. The invention also relates to identifying agents capable of affecting a phenotype of a knockout mouse. Also described are methods of determining whether expansion of the trinucleotide repeat in a gene encoding TRP produces a phenotypic change. The transgenic animals and the cells are useful for identifying compounds capable of ameliorating disease symptoms, and as test substrates for the identification of drugs, pharmaceuticals, therapies and interventions which may be effective in treating trinucleotide repeat disorders are ideal model systems to study the progression of disease in vivo, the molecular medal systems to study the progression of disease in vivo, the molecular basis of these diseases and show the features observed in human disease. Using the mice, it is possible to model both the pathogenic mechanism and the trinucleotide repeat instability in the mouse embryonic stem (ES) trinucleotide repeat protein describes methods of producing present sequence encodes for). The invention describes me

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents the DNA sequence of an expanded T243

gene. The T243 gene encodes for a trinuclectide repeat protein (TRP). The
invention describes methods of producing embryonic stem (ES) cells

comprising a heterozygous disruption in a target DNA sequence (preferably

comprising a heterozygous disruption in a target DNA sequence (preferably

comprising a heterozygous disruption in a gene encoding TRP, where the disruption

inhibits the production of the wild type TRP. The invention also relates

conidentifying agents capable of affecting a phenotype of a knockout

mouse. Also described are methods of determining whether expansion of the

trinucleotide repeat in a gene encoding TRP produces a phenotypic change.

The transgenic animals and the cells are useful for identifying compounds

capable of ameliorating disease symptoms, and as test substrates for the

identification of drugs, pharmaceuticals, therapies and interventions

which may be effective in treating trinucleotide repeat disorders e.g.

fragile X syndrome and Huntington's disease. The animal models for

trinucleotide repeat disorders are ideal model systems to study the

progression of disease in vivo, the molecular basis of these diseases and

show the features observed in human disease. Using the mice, it is

possible to model both the pathogenic mechanism and the trinucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel transgenic animals useful as animal model for characterization of function of a gene encoding trinucleotide repeat proteins (TRPs), contains heterozygous disruption in a gene encoding TRP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Score 1725.2; DB 4; Length 1848;

The present sequence encodes a protein involved in fibroblast growth factor (FGF) signal transduction. Such proteins are useful for analyzing the mechanism of formation of various organs, such as midbrain opticatetum portion by a midbrain mesencephalon border, the mechanism of formation of cerebellum. mechanisms of formation of inner ear, blood vessels, limb buds, teeth, and canceration mechanisms of a cell.
                                                                                                                                                                                                                                                                                                                                                                                    Novel gene encoding protein involved in fibroblast growth factor signal transduction, useful for analyzing mechanism of formation of organs such as midbrain optic-tectum portion, cerebellum, inner ear and canceration mechanism of cell.

The present invention relates to the isolation of human nuclear factorkappaB (NP-kappaB) associated polypeptides and polynucleotides. The NPkappaB associated polypeptide and polynucleotide sequences are useful for
preventing, treating or ameliorating various disorders including immune
disorders, inflammatory disorders, cancers, disorders relating to
aberrant apoptosis, hepatic disorders, Hodgkin's lymphomas,
concern apoptosis, hepatic disorders, Hodgkin's lymphomas,
concern apoptosis, hepatic disorders, Hodgkin's lymphomas,
concernation of the concernation of the concernation of dysplasia, immunodeficiency,
concernation of the concern

```

New nucleic acid molecule encoding an NFkappaB associated molecule, useful for diagnosing, preventing, treating, or ameliorating a medical condition, e.g. cancer, wounds, or immune, inflammatory, hepatic, viral or pulmonary disorder.

8

(BRIM) BRISTOL-MYERS SQUIBB

Nadler SG;

Carman J, Feder JN, 2005-047909/05. P-PSDB; ADU83186 Claim 1; SEQ ID NO 139; 646pp; English.

The invention relates to an isolated nucleic acid molecule having

NEKARAPABE (nuclear factor kappa B) modulating activity (or its fragments,

ariants, homologs and sequences hybridizing to it). Also included are an

isolated polypeptide capable of modulating an NFkappaB response (or its

domain, epitope, variant, species homolog or interacting protein), an

isolated antibody that binds specifically to the isolated polypeptide, a

method for preventing (treating, or ameliorating) a medical condition, a

method of diagnosing a NFkappa associated condition (or a susceptibility

to a NFkappaB associated condition) in a subject, a method of identifying

a compound that modulates the biological activity of a NFkappaB

associated molecule, a method of screening for a compound that is capable

of modulating the biological activity of a NFkappaB

associated molecule as identified by any of the methods above. The

anceleic acid molecule as identified by any of the methods above. The

condition, e.g. immune disorder, an inflammatory disorder in which

condition, e.g. immune disorder, an inflammatory disorder related to

condition, e.g. immune disorder, an inflammatory disorder related to

aberrant NFkappaB regulation, a cancer, aberrant apoptosis, hepatic

condition, e.g. immunedeficiency, an inflammatory disorder related to

aberrant NFkappaB regulation, a cancer, aberrant apoptosis, hepatic

disorders, Hodgkins lymphomas, hematopoietic tumors, hyper-IgM syndromes,

HYD-1, HTM-1, HTM-1, hepatitis B, hepatitis C, EBV, influenza, viral

confliction, e.g. immunedeficiency, and inflammatory viral infections,

creplication, host cell survival, and evasion of immune responses. rheumatoid arthritis, inflammatory bowel disease, colitis, asthma, atherosclerosis, cachexia, euthyroid sick syndrome, stroke, BAE, autoimmune disorders disorders disorders instanced to hyper immune activity, disorders related to aberrant acute phase responses, hypercongenital conditions, birth defects, necrotic leaions, wounds, organ transplant rejection, conditions related to organ transplant rejection, disorders related to aberrant signal transduction, proliferating disorders, HIV

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Š
                                                                                                                                                                                                                                                                                                                                                                                                                                            AAS21244-AAS21518 encode for novel human secretory and transmembrane PRO polypeptides. The PRO polypeptides are useful to detect other PRO polypeptides, to link bioactive molecules to cells expressing PRO polypeptides, to modulate biological activities of cells expressing PRO polypeptides, and to detect the presence of mammalian lung, colon, breast, prostate, rectal, cervical or liver tunours by comparing PRO polypeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumour necrosis factor alpha (TNF-alpha) from human blood, the proliferation or differentiation of chondrocytes, the proliferation or proliferation of inner ear utricular supporting cells or of the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes, or the proliferation of endothelial cells. Some of the PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The polymcidenia process encoding PRO polypeptides can be used in assays to identify molecules transgenic or knock out animals and can be used in gene therapy

The present invention relates to the isolation of novel human PRO
polypeptides, and the polynucleotide sequences encoding them. The PRO
polypeptides are secreted and transmembrane proteins. The PRO
polypeptides are useful for detecting other PRO polypeptides, for linking
polypeptides are useful for detecting other PRO polypeptides, for linking
biological activities of cells expressing PRO polypeptides, and for for
identifying agonists or antagonists. The PRO polypeptides are useful for
contentifying agonists or antagonists. The PRO polypeptides are useful for
the stimulating the release of tumour necrosis factor (TNF)-alpha from
the ploof, for stimulating the proliferation or differentiation of
chondrocytes, and detecting the proliferation or differentiation of
chondrocytes, and detecting the presence of tumours. The polynucleotide
sequences encoding PRO polypeptides are useful as hybridisation probes,
in chromosome and gene mapping, in the generating transgenic
DNA, in the preparation of PRO polypeptides, for generating transgenic
animals or knockout animals, for the generic analysis of individuals with
content of isorders, and in gene therapy. ACA03603-ACA03877 represent cDNAs
encoding the human PRO polypeptides of the invention. Note: The sequence
data for this patent was obtained in electronic format directly from the
USPTO web site at sequate.
                                                                                                                                                                                                                                                                                                                                                                                                                                  New secreted and transmembrane PRO nucleic acids, useful for gene therapy, in chromosome and gene mapping, as chromosome markers, in tissue typing, and in chromosome identification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GCCTGCCCAGCAAATGCGAAGTGTGTAAATATGTTGCTGTGGAGCTGAAGTCAGCCTTTTG

Two hundred and seventy five nucleic acids encoding PRO polypeptides, useful for treating pericyte-associated tumors, diabetes and various bone and/or cartilage disorders, e.g. arthritis.

The invention describes an isolated human PRO polypeptide. The PRO polypeptides are useful in detecting PRO polypeptides in a sample, in constraint a bioactive molecule to a cell expressing a PRO polypeptide, and in modulating at least one biological activity of a cell expressing a PRO in modulating at least one biological activity of a cell expressing a PRO polypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus cusful for treating cardiac insufficiency disorders. PRO154 and PRO136, PRO943, PRO944, PRO944, PRO943, PRO943, Induce the Coreased mesangial cell function such as Berger disease or other comphropathies associated with dermatitis, herpotherican such the reference of injuries, PRO9132, PRO913, and PRO91397 induce the Change of these pro9110, PRO944, PRO9131, PRO913, Induce the Change of these pro9110, PRO944, PRO9131, PRO913, Induce the Change of these pro91 bush propers injuries, and arthritis. This sequence of the proper bush human PRO PROPES. encodes a novel human PRO protein

The invention relates to an isolated nucleic acid comprising at least 80 sequence identity to a PRO (secreted and transmembrane protein) cDNA comprising a nucleic acid (a) encoding a PRO polypeptide, or its extracellular domain (with or without its associated signal peptide), which comprises any of the 275 120-850 residue amino acid sequences, given in the specification; (b) comprising any of the 275 300-3500 nucleotide sequences, given in the specification; or (c) comprising the full-length coding sequence of the nucleotide sequences given in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gao
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO1114 PRO4978, useful in molecular biology, chromosome and gene mapping, generating antisense RNA and DNA, and in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Baker KP, Beresini M, Deforge L, Desnoyers L, Filvaroff E, G:

Specification (ATCC) Accession Numbers listed in the American in per dispersion of ATCC) Accession Numbers listed in the specification.

Also included are a vector comprising the novel nucleic acid, a host cell comprising the vector, producing a RPO polypeptide, the isolated RPO polypeptides detailed above, a chimmeric molecule comprising the PRO polypeptide of fused to a heterologous amino acid sequence, an anti-PRO polypeptide of fused to a heterologous amino acid sequence, an anti-PRO comprising a RPO polypeptide, including at least one biological activity of a cell expressing a RPO polypeptide, stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, (or proteoglycans from cartilage or cytokine from peripheral blood monouclear cells (PBMC)), andipocyte cells or proliferation of or gene expression in pericyte cells, stimulating the proliferation of rinner ear utricular supporting cells), stimulating the proliferation of rinner ear utricular supporting cells, or of T-lymphocyte cells, or of endothelial cells), inhibiting the binding of A-peptide to factor VITA, or differentiation of adipocyte cells (or of T-lymphocyte cells, or of the polymore in a mammal and an oligonucleotide probe derived from any of the nucleotide sequences given in the specification. The polymore in a mammal and an an oliferation and an an antisense RNA and DNA, and in gene therapy. The combinant techniques, and in generating either transgenic animals or recombinant techniques, and in generating either transgenic animals or recombinant techniques, and in generating either transgenic animals or antibody is used in preparing a medicament for treating a condition and in serious disconting a medicament for treating a condition arranged and an arranged and the propersive or the polymore and second antibody, such animals which, in the preparating a medicament for treating a condition and an arranged and an arranged and an arranged and an arranged and and an arranged and and and an arranged and and an arranged and a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                646
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     287 cecescadadadadececececererrradearecedececececedecardadarread 346

New secreted and transmembrane nucleic acids and polypeptides, designated as PRO, useful for treating inflammation, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS, or cancer.

Claim 2; Fig 135; 659pp; English.

The invention relates to an isolated nucleic acid comprising, or which is at least 80% identical to, or the full-length coding sequence of, any of the 27% nucleotide sequences, encoding the corresponding PRO polypeptide (one of 275 secreted or transmembrane proteins). The nucleic acid further comprises the full-length coding sequence of the DNA deposited under the specification. Also included are vectors and host cells for in the specification. Also included are vectors and host cells for producing PRO proteins, PRO tusion proteins, anti-PRO antibodies, PRO extracellular domains and mature sequences, methods of detecting PRO proteins and mature sequences, methods of detecting PRO corresis factor alpha) from human blood, (and the proliferation of corresis factor alpha) from human blood, (and the proliferation of corresis factor alpha) from human blood, (and the proliferation of correction of artilage, proliferation of funct ear urticular supporting cells, the catilage, proliferation of funct ear urticular supporting cells, the correction of activation of any proliferation of function of inner ear urticular supporting cells, the correction of a cytokine from peripheral blood monounclear cells, the release of a cytokine from peripheral blood monounclear cells, the release of a cytokine from correction of T-lymphocyte cells, an eached for modulating the uptake of glucose or free endothelial cells), a method for modulating the uptake of glucose or featured binding of A-peptide to factor VIIA, or the differentiation of adeceting the presence of a tumour in a mammal and olygomucleotide probe derived from any of the nucleotide sequences cells, and polypeptides are useful for treating confidence of immunodeficiency syndrome), cancer, or diabetic complications. The nucleic acids are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. Both concern angelul at pharmaceuticals, diagnostics, biosensors or bioreactors. Both

Novel secreted and transmembrane polypeptide for modulating biological activity of cell expressing the polypeptide, identifying agonists or antagonists of polypeptide, and as molecular weight markers.

Claim 2; Fig 135; 659pp; English.

The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (1). (1) is useful for stimulating the cralesse of TWF-alpha from human blood, for modulating the uptake of glucose or FFA by skeletal muscle cells or adipocyte cells, for glucose or FFA by skeletal muscle cells or adipocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of inner ear utricular supporting cells, constimulating the proliferation of T-lymphocyte cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the proliferation of function of adipocotic cells, for stimulating the proliferation of endothelial cells, for stimulating the proliferation of endothelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, colls, for simulating genomic and cDNA nucleotide sequences or arrisense probes. (1) is also useful as therapeutic agent. PRO is useful in assays to identify other proteins or molecules involved in binding in assays to identify other proteins or molecules involved in binding in assays to identify other proteins or molecules involved in binding correction. A polynucleotide (II) encoding (I) is useful in the development and correction of PRO polypeptide, for generating transgenic animals which in turn are useful in the development and correcting of therapeutically useful reagents, in gene therapy, for chromosome identification, as chromosome anaker, and for generating chromes identification, as chromosome anaker, and for generating chromesian in specific cells, tissues or serum, and for
